[veluruharish4503@gmail.com](mailto:veluruharish4503@gmail.com) | [LinkedIn](#) | [Portfolio](#)

Software Engineer | Java Full Stack Developer with **3.6+ years of experience**, building scalable enterprise web applications using **Angular, Java, and Spring Boot**.

## Skills

**Frontend:** Angular 14+, HTML5, CSS3, JavaScript, TypeScript, RxJS, Bootstrap, Responsive Web Design  
**Backend:** Core Java, Spring Boot, Spring AI, Spring Security, REST API Development, Hibernate, JPA, Microservices Architecture  
**Databases:** MySQL, MongoDB  
**Testing:** Cypress, Jasmine, Karma, Junit, Mockito  
**Cloud & DevOps:** AWS, Git, GitHub, Perforce, CI/CD Concepts, Docker, Kubernetes  
**Methodologies:** Agile, Scrum, Restful Architecture, Clean Code principles  
**AI Skills:** Generative AI, Agentic AI

## Experience

**Light & Wonder | Product Based | Bengaluru, India**

### Software Engineer

10/2025 - Present

Designed and developed scalable RESTful APIs using Spring Boot, enabling seamless integration between Angular front-end applications and backend services.

- Built dynamic gaming user interfaces using Angular, improving application responsiveness and enhancing user engagement.
- Implemented lazy loading and modular architecture in Angular to reduce initial load time and improve performance.
- Developed database schemas and CRUD operations using Hibernate/JPA and MySQL, ensuring efficient data handling and reliability.
- Collaborated with backend and product teams to ensure seamless communication between front-end and backend systems through REST APIs.
- Contributed to performance optimization and code quality improvements, following best practices in scalable web application development.

**Happiest Minds Technology | Service Based | Bengaluru, India**

### Software Engineer

08/2022 - 10/2024

Developed and maintained responsive web applications using Angular 14+ and TypeScript, delivering high-performance user interfaces.

- Translated UX/Figma designs into responsive and accessible UI components, improving usability and customer experience.
- Implemented real-time functionalities including dynamic product search and interactive shopping cart, improving user engagement.
- Optimized platform performance by improving page load speed, lazy loading, and efficient state management.
- Maintained code quality and version control using Git and collaborative development workflows.
- Worked closely with backend developers and QA teams to ensure reliable API integration and high-quality product releases.

## Projects

### Kiosk - Player Management System

- Developed a self-service reception kiosk system that streamlines visitor check-ins and queue management.
- The Casio Center Reception Machine streamlines visitor check-ins, manages queues, offers real-time updates, and integrates systems for efficient service delivery, enhancing customer experiences and operational productivity.

### TMF Cobalt Portal

- Focused on enhancing a global payroll service portal by leveraging Angular 17. Worked closely with UX designers to transform wireframes into responsive interfaces and utilized Sass to maintain scalable and efficient stylesheets.
- Implemented scalable styling architecture

### TMF Horizon Exchange Portal

- Modernized an enterprise payroll portal by migrating from AngularJS to Angular 14.
- Designed and developed a responsive web application using Angular framework to efficiently manage tasks.

## Certificates

- **Data Structures in Java**  
Coding Ninjas | 09/2023-12/2024
- **AI Courses**  
Anthropic Skill Jar | 01/2026-03/2026

## Education

### Bachelor of Engineering

K S School of Engineering and Management | CGPA: 80% |  
2018-2022
